

SURAJ KUSHWAHA

Backend Developer • Node.js & Database Systems

surajkushwaha371@gmail.com | +91 6307624976 | Lucknow, India | [portfolio-eight-lemon-63.vercel.app](#) | [github.com/suraj371k](#)

PROFESSIONAL SUMMARY

Backend Developer with hands-on experience building agentic AI and Retrieval-Augmented Generation (RAG) systems, including LangGraph-orchestrated multi-node workflows, Pinecone vector search, and async Node.js backends. Strong focus on server-side architecture — REST API design, database schema modeling across MongoDB and PostgreSQL, JWT/RBAC authentication, real-time features with Socket.io, and multi-tenant SaaS architecture. Has independently designed, built, and deployed multiple backend systems end-to-end, from database schema through CI/CD, using Docker, GitHub Actions, AWS S3, Render, and Vercel.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS, shadcn/ui, Zustand

Backend: Node.js, Express.js, REST APIs, Socket.io, JWT, RBAC

Agentic AI & RAG: LangChain, LangGraph, RAG, Pinecone, Groq, Gemini API

Databases & Caching: MongoDB, PostgreSQL, Redis, Prisma

Cloud & DevOps: AWS (S3, RDS), Docker, GitHub Actions, CI/CD, Vercel, Render

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern — CodeAries

September 2026 – Present

- Joined the development team to work on MERN stack and AI-integrated projects.
- Currently getting up to speed on the codebase and team workflows.

Full Stack Developer Intern — Denote

July 2025 – August 2025

- Built a full-stack web application using React, TypeScript, and Supabase, including real-time data synchronization and user authentication.
- Integrated the Groq AI API to power automated content generation and AI-assisted user interactions.
- Implemented real-time collaborative features using Supabase's real-time subscription channels.

KEY PROJECTS

Multi-Document RAG Chatbot — Agentic AI Platform

Node.js • LangGraph • Pinecone • PostgreSQL • Prisma • Next.js • AWS S3 • Groq

[GitHub](#)

- Built an agentic LangGraph workflow that routes each query across document retrieval (RAG), live web search, or a direct LLM response, with per-conversation state checkpointed in PostgreSQL for persistent multi-turn sessions.
- Built a Retrieval-Augmented Generation pipeline using Pinecone vector search over chunked, embedded PDF documents, enabling users to query multi-document knowledge bases with source-grounded answers.
- Built an asynchronous document ingestion pipeline (Node.js background jobs) for S3 upload, text extraction, chunking, and vector indexing, with real-time status tracking.
- Implemented JWT authentication, per-user rate limiting, and long-term conversational memory via LangGraph's Store API; deployed across Render and Vercel with async Prisma migrations.

CodeVault — Multi-Tenant Code Snippet Platform

MERN Stack • LangChain • Gemini API • Socket.io • Redis • PostgreSQL • Prisma • razorpay • JWT • RBAC

[GitHub](#) | [Live Demo](#)

- Built a multi-tenant SaaS platform where users create organizations and invite team members with scoped role-based permissions (owner, admin, member) and per-tenant data isolation.
- Integrated LangChain + Gemini API to auto-summarize each snippet on creation and power a streaming, context-aware AI chatbot per snippet.
- Built real-time team chat (direct and group) using Socket.io, with real-time notifications for member joins, snippet edits, and comment activity.
- Added a Redis caching layer for snippet reads and session/notification data to reduce database load and improve API response times; integrated razorpay for monthly/yearly subscription billing.

EDUCATION

Bachelor of Computer Application (BCA) — BBD University, Lucknow

2022 – 2025

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Web Technologies, Software Engineering
